

DecoFlex F

Achieving outstanding decoration solutions.

Your Benefits

- Highest production flexibility due to modular concept
- Simple and quick changeover to another processing combination
- Multiple/multicolor decoration in one process
- Combination of stroke and roll-on stamping

Technical data

Output	up to 35 parts/minute
Part- Ø	8 – 30 mm (bigger diameters upon request)
Part length	20 – 100 mm by using two-side part support (or upon request)
Part height	20 – 50 mm by using one-side part support
Stamping width	up to 100 mm on 360°
Foil roll	inner-ø 25,4 mm outer-ø 200 mm
Conicity half-angle	Max 12°

Combining complimentary production steps in an overall process

Modular hot stamping machine for high precision hot stamping of cylindrical, angled, non-circular and conical parts like mascara, sleeves, liners, etc. as well as heat transfer applications with foils.

With the highest hot stamping accuracy, the DecoFlex F can run with up to 2 stamping modules in parallel (double output for same decoration) or serial operation (2 different decorations one after the other on the same part). The products are electronically controlled with conical stamping. The inspection system delivers 100% quality control of the full production. This modular concept machine with its compact design offers flexible decoration for premium cosmetic production.
